Brain Fables: The Hidden History of Neurodegenerative Diseases and a Blueprint to Conquer Them - Brain

Fables: The Hidden History of Neurodegenerative Diseases and a Blueprint to Conquer Them by Cambridge University Press 802 views 4 years ago 2 minutes, 26 seconds - An estimated 80 million people live with a **neurodegenerative disease**, with this number expected to double by 2050. Despite ...

Neurodegenerative Diseases Lecture - Neurodegenerative Diseases Lecture by Neuroscience Alliance at UCF 991 views 5 years ago 49 minutes - www.brainfacts.org Video made solely for educational purposes All rights reserved to their respective holders Made in association ...

Neurodegenerative Disorders Chapter 15

Initially muscle coordination is impaired dementia, cognitive disorganization, and personality change. Eventually voluntary and involuntary movements become

Alzheimer's Disease The most common form of dementia

Diagnosis of Alzheimer's In early stages, diagnosis can be made with 80% accuracy In later stages, accuracy can be 90% at some centers. Doctors look at history, neurological exams, psych exams, lab tests, and brain imaging while patient is alive Final confirmation can only be made upon autopsy by looking at brain tissue Similar deficits could be due to other conditions including Lewy body disease, frontotemporal dementia, Parkinson's disease, stroke, a tumor, sleep disturbances, side effects from medication, or infection

Neurons that control voluntary muscle movement are lost Very poorly understood Specifically, motor neurons in brain and spinal cord, disintegrate Since signals cannot be carried by these damaged nerves to the body, muscles begin to atrophy from lack of use 90% of ALS cases are sporadic No familial history; it just happens ? Other 10% is inherited by family members Several genes have been identified to cause forms of ALS

Dopamine producing cells in the midbrain disintegrate Are called Substantia Nigra When -40% of cells are lost, symptoms begin to present Tells us that brain can adapt, but eventually cannot take any more Cause remains unknown Both environmental and genetic causes are being considered

First described in tribe native to New Zealand who practiced funerary cannibalism Misfolded proteins were transmitted to healthy tribe members through consumption of the brains of deceased relatives Onset occurs 20-40 years after exposure Psychosis, behavioral changes, and lack of cognition are common

Questions 1. What is a significant difference between Huntington's Disease and Parkinson's Disease? Why is there such a difference?

Eric Westman: Seeking mechanisms behind neurodegenerative disorders - Eric Westman: Seeking mechanisms behind neurodegenerative disorders by Karolinska Institutet 395 views 4 years ago 1 minute, 22 seconds - Eric Westman combines brain imaging with machine learning to search the whole brain for the mechanisms behind ...

What is neurodegeneration? - What is neurodegeneration? by The Sheekey Science Show 2,530 views 5 years ago 8 minutes, 8 seconds - What actually is **neurodegeneration**,? What are the major causes and where are we at with research? Alzheimer's **disease**, (AD) is ...
